

# PACS PRO Communicator

## Specification sheet

### Robust protection with a natural response and integrated high-fidelity speakers

The PACS PRO Communicator offers the best of both worlds combining our flat response hearing protection with the same high-fidelity speakers as used in our J-Series In-Ear monitors. The PACS PRO Communicator allows those working in noisy environments to stay in touch and in tune with their surroundings and also connect to monitoring and communications systems with confidence for crystal clear communications and highly accurate monitoring. The PACS PRO Communicator gives you control of your sound environment and allows you to perform in complete comfort and safety using the most natural filters and speakers available.

### Hear everything you need to and nothing you don't

The PACS PRO Communicator is a revolution in in-ear monitoring and communication solutions offering both hearing protection and audio playback of the highest fidelity. The PACS PRO filter gives optimum protection in high-noise environments keeping all the frequencies you hear in perfect balance but at safe levels, using the latest filter design techniques it also keeps your own voice sounding perfectly natural, aiding communication. For audio playback the PACS PRO Communicator uses the same highly accurate speaker that we use in our J-Series custom in-ear monitor giving you rich and detailed sound for both vocal communications and music monitoring making it perfect for all kinds of audio sources, finished with a 3.5mm stereo connector you'll also have no trouble connecting it to whichever equipment you like. The PACS PRO Communicator gives you the ability to work in confidence in the loudest of environments knowing that what you hear is precisely accurate whether it's your audio feed or the sound in the world around you.

### The next generation of filter design

The PACS PRO filter series have been designed anew with the wearer in mind. For starters, it's smaller than many competing filters which means it can fit into smaller ears without any protrusion which is great for both comfort and aesthetics because it will always fit snugly underneath a helmet. The filters are also interchangeable so you can chop and change as your environment demands to any other filter in the PRO range giving you complete control over your protection with just a single set of earmoulds.

## Filters

All our PACS Pro Range Filters can be fitted into the PACS Pro Communicator, so you can customise the PACS Pro Communicator to suit your needs. The PACS PRO filters range from an avg. attenuation of 12 dB to 31 dB (class 5) incl. Impact Filters for sudden impact noises.

## Technical Specifications

<b>No. of Drivers</b>	2 (1 in each earmould)	<b>Cable Type</b>	Clear Kevlar
<b>Build Material</b>	40 shore, custom fit, medical grade silicone	<b>Connector</b>	3.5 mm standard (different options)
<b>Mould Type/s</b>	Canal Mould	<b>Frequency Range</b>	40Hz-20KHz
<b>Cable Exit Options</b>	Bottom (straight down) – Top (over ear)	<b>Sensitivity</b>	105.5db
<b>Standard Cable Length</b>	1.4 m	<b>Impedance @1KHz</b>	50 Ohms

**Items included:** 1 set of PACS Pro Filters, Carry Pouch, wax pick, user instructions, comfort cream
